the pingue in the tactse fly is the infecting agent. The parasite introduced into the body by the insect's hite develops rapidly through the blood and the cerebro-spinal fluid.

Commissioners sent to Africa to study the disease divide its activity into three stages. The first is marked by high fever and a rapid pulse. In the second, the mind becomes dull, the gait slow and shuffling, there are tremers throughout the body. The fever leaves in the final stage and the temperature becomes sub-normal. The patient becomes sicepy and lethargic and sinks into a coma, from which he is never aroused.

I am not trying to block any inquiry that should be made, as I see it. If there is any phase of the situation that has not the committee. It has had plenty of

time and plenty of money." "But, Mr. Speaker, how about the upstate commission, Senator Thompson wants to investigate that?" was

"I can't help that," was the reply, "he has had plenty of time to investigate the public service commissions. If the time has been wasted down in there has been some talk about the there has been some talk about the Lockport rate case, but I happen to know that decision was the result of conferences between all parties concerned and there can be no scandal connected with it. If it is shown that there is need of an investigation of the Second District Commission, another committee can be appointed.

"So far as I am concerned, the
